### **Description of Release Package contents:**

SmartOne-Configuration-Program\_3\_4\_20.exe - Executable file for the SmartOne Configuration Software Program  
SmartOne\_Configuration\_Software\_Release\_Notes.pdf - This file

### **SmartOne Configuration Software program Release Notes:**

SmartOne Configurator Software v3.4.20 contains:

- Added support for continuous GPS mode for Smartone C devices (devices *must* be line-powered due to increased battery drain)
- Due to added features, updated configuration file extension to .gcfg4
- Removed DFU button from the configuration tool
- Bug Fix: Prevents users from programming airfinder or the Beaconing mode in non-SmartOneSolar devices
- Bug-Fix: Removed invalid parameter popup when in motion interval is greater than or equal to at-rest interval

SmartOne Configurator Software v3.3.10 contains:

- Added new ESN range for SmartOne C: 43000000-43999999
- Fixed SmartOne Solar programming cable timeout issues.
- Includes new features for only SmartOne Solar:
  - Pin 1 power
  - Beaconing mode
  - AirFinder
- Authorization code window for enabling Airfinder

SmartOne Configurator Software v3.3.6 contains:

- Upload Firmware button is now enabled after successful DFU over Bluetooth.

SmartOne Configurator Software v3.3.5 contains:

- Upload Firmware button is now available after every Serial DFU.
- Show error dialog if attempting to program Solar-only features to non-Solar devices.
- SmartOne Solar Configuration features are now marked in the User Interface.

SmartOne Configurator Software v3.3.4 contains:

- Change of text for the configuration history.
- Bug Fix - Diagnostic Interval data is properly loaded

SmartOne Configurator Software v3.3.3 contains:

- Bug Fix - Ghosting of the Read window.
- Bug Fix - Bluetooth Reading dialog does not show unnecessarily.
- Text change to "Send message when voltage:" for Wetted Voltage.

SmartOne Configurator Software v3.3.2 contains:

- Text is changed from Closes to  $\geq 3V$  and from Opens to  $< 3V$  for input 1 and 2.
- Input 1 and 2 types are now mentioned in the View Summary
- Input 1 and 2 tab controls are now synchronized with the Status Changed Message, Undesired State Message and Accumulate Message.  
If you change the Type of Input; the SC Message, US Message and Acc Message tabs will change too and vice versa.
- Bug Fixes: Read Time out issue

SmartOne Configurator Software v3.3.1 contains:

- Dry Contact and Wetted Voltage on Input 1 and Input 2
- Warning dialog box upon changing the Speed and Heading settings.
- Clearing or Removing the interval does not clear the ESN list.

SmartOne Configurator Software v3.2.13 contains:

- All the ESNs are now properly added to the Configuration History
- Programming over serial now adds to the Configuration History

Note: History file format changed.

SmartOne Configurator Software v3.2.12 contains:

- Bug Fix - Only programs the selected ESNs

SmartOne Configurator Software v3.2.10 contains:

- Bug Fix - Open Configuration from History (Error Code 103) is now solved.

SmartOne Configurator Software v3.2.9 contains:

- Reliable Programming multiple devices through Serial
- Support for SmartOne B
- Support for older Configuration History files
- Fixed Speed and Heading issue in New Configuration
- UI Bug Fixes.

SmartOne Configurator Software v3.2.8 contains:

- Resume feature in BLE DFU is implemented. Improved reliability.
